

ZEPHYR FILTRATION INTRODUCES

Water Treatment Systems for High Volume Evaporative Cooling

HVW // SERIES by Zephyr Filtration is a proprietary evaporative cooling water treatment system that supports the needs of High Volume water demands. It significantly reduces the maintenance requirements of your systems, also improves the overall operating performance and the life cycle of your Facilities Evap Equipment assets.

Our Catalytic Process converts CA (calcium) and MG (magnesium) into harmless micro crystals. $CA (HCO_3)_2 > CaCO_2 + CO_2 + H_2O$. These minerals remain in a suspended state, making them easy to purge out.

Features Include:

- Prevents the build-up of scale
- Easy installation
- 480 GPH system
- Low annual maintenance costs
- Easy filter replacement
- Corrosion inhibitor
- No chemicals needed
- No electrical connections needed

The filtration system can also be used in ice and soda machines.
